A greener option

We've tested and tried for hours and hours, to find a granule with the right shape, density and size, to efficiently clean your wash ware. All while being kind to the environment. PowerGranules BIO is partly biobased, and made from three main ingredients: calcium salt, rapeseed oil, and a combination of biodegradable polyesters.

Its special composition gives it the right characteristics; hard enough to remove even baked-on food, but soft enough not to harm your cook ware.

PowerGranules BIO is in full compliance with the EU requirements for use in contact with food, and harmless in case of ingestion.

Low water & CO₂ footprint

Our smart pot washing solutions use in average 70% less water, chemicals, and energy than other pot washing methods. With the introduction of PowerGranules BIO our award-winning Granule technology becomes even more sustainable.

For example, our new granule has a 25% lower CO₂ footprint and demands 87% less water in the manufacturing process than PowerGranules Original (POM).
